BRI DAO — Whitepaper (EN)

1. Introduction

Welcome to BRI DAO — an open, decentralized structure for research and practical development of predictive scenarios for crypto assets and geo-cosmic cycles.

2. Concept

The project combines modern technologies, the use of AI for prediction, real-time data processing, and an open governance mechanism. The foundation is our own calculation core and predictive modules.

3. Core Modules

- Prediction Engine
- Event Analysis Engine
- Cycles Calculation (geo-cosmic, planetary, financial)

4. Governance

The DAO will operate transparently, with all code and documentation openly available in this repository.

5. Roadmap

1. Core launch

2. Frontend development
3. Prediction scenarios
4. Continuous improvement

6. License

This project is distributed under the MIT License.

7. Contact

Initiator: Alisher Yulchiev
Email: [to-be-added]

Notes

All updates will be available in the GitHub repository in real time. Contributions are welcome!
